EDUCATION

BACHELOR OF ENGINEERING

SIES Graduate School of
Technology
2024-2028

HSC - SCIENCE

RADAV COLLEGE, BHANDUP
2022 - 2024

SSC

SVPM KALWA , THANE - 400605

SKILLS

Tech Stack:-

- Python (FastApi, Flask)
- HTML/CSS
- SQL
- Javascript

Tools & IDE's :- VS Code , Jupyter
Notebook , PgAdmin

Languages :- English , Hindi ,
Marathi

Extra - curriculum

Events:-

- Hackcelestial
- Enigma
- Cognition

Member - CSI Club
(Marketing Team)

OBJECTIVE

Driven CSE - Data Science student seeking an internship to apply a strong academic foundation and practical expertise in Machine Learning and Natural Language Processing. Proven ability to contribute to real-world projects by developing AI-powered matching engines and hybrid data acquisition systems. Eager to learn from industry mentors while supporting your team's data-driven goals through scalable Full-Stack and Data Science solutions.

PROJECTS :-

Skillify - AI Career Intelligence & Job Matching

- Hybrid Data Engineering: Architected a **75/25** data acquisition strategy, balancing high-speed **API integration** (JSearch/Adzuna) with custom **Selenium/BeautifulSoup** scrapers for niche boards like Internshala and Indeed.
- ML Matching Engine: Developed a hybrid scoring system using **TF-IDF Vectorization** and **Cosine Similarity** to calculate semantic profile-to-job fit, combined with a deterministic skill-matching algorithm.
- Market Insights & Optimization: Integrated **real-time market analysis** to track **trending job roles** and salary benchmarks; built an automated **Resume Feedback system** that **identifies skill gaps** and provides actionable **improvement tips**.
- Tech Stack: Python (**FastAPI**), **Scikit-Learn**, **spaCy** (NLP), SQL (TiDB Cloud), and Chart.js for data visualization.

Finfigo - Intelligent Tax Management

- Developed a full-stack, AI-powered tax management platform designed to simplify India's GST and ITR processes for both salaried professionals and business owners.
- Built dual tax-calculation engines, integrated Google Gemini for personalized tax advice, and implemented real-time GST/ITR news feeds using the News API.
- The system includes interactive dashboards (Chart.js), GST rate lookup, and automated multi-page PDF reporting (ReportLab).
- Architected using **Python (Flask)** with **TiDB** Cloud as a scalable MySQL-compatible database backend, and a responsive **HTML/CSS/JS** frontend.

Amazon/Flipkart Price tracker

- Built a Python-based web application that monitors product prices and alerts users on drops.
- It includes a backend script (**tracker.py**) to periodically scrape e-commerce sites and a **frontend (HTML/CSS)** interface for managing tracked products.
- Key functionality: add product URLs, set target price thresholds, and receive notifications when the current price falls below the set target.
- Technologies used: Python for scraping and logic, web templating for UI, and scheduled jobs for regular checks.
