EDUCATION

BACHELOR OF ENGINEERING

SIES Graduate School of

Technology

2024-2028

HSC - SCIENCE

RADAV COLLEGE, BHANDUP

2022 - 2024

SSC

SVPM KALWA, THANE - 400605

SKILLS

Tech Stack:-

- Python
- HTML
- CSS
- SQL
- Javascript

Tools & IDE's :- VS Code , Jupyter

Notebook , PgAdmin

Languages :- English , Hindi ,

Marathi

Extra - curriculum

Events:-

- Hackcelestial
- Enigma
- Cognition

Member - CSI Club

(Marketing Team)

Meet Mourya

OBJECTIVE

Driven **CSE - Data Science** student seeking an **internship** to apply my academic foundation in data analysis and machine learning. Eagerness to **learn** from industry mentors, develop practical expertise, and contribute to **real-world projects** by supporting your team's data-driven goals.

PROJECTS

Here's two of my major project :-

Finfigo - Intelligent Tax Management

- Developed a full-stack, AI-powered tax management platform designed to simplify India's GST and ITR processes for both salaried professionals and business owners.
- Built dual tax-calculation engines, integrated Google Gemini for personalized tax advice, and implemented real-time GST/ITR news feeds using the News API.
- The system includes interactive dashboards (Chart.js), GST rate lookup, and automated multi-page PDF reporting (ReportLab).
- Architected using **Python (Flask)** with **TiDB** Cloud as a scalable MySQL-compatible database backend, and a responsive **HTML/CSS/JS** frontend.

Amazon/Flipkart Price tracker

- Built a **Python-based web application** that monitors product prices and alerts users on drops. It includes a backend script (**tracker.py**) to periodically scrape e-commerce sites and a **frontend (HTML/CSS)** interface for managing tracked products.
- Key functionality: add product URLs, set target price thresholds, and receive notifications when the current price falls below the set target.
- Technologies used: Python for scraping and logic, web templating for UI, and scheduled jobs for regular checks.
